

Help us understand tear biomarkers in Traumatic Brain Injury (TBI)

About the study:

Researchers at UNSW Sydney are investigating how tear fluid and corneal nerves may reveal important clues about Traumatic Brain Injury (TBI).

Eligibility:

- Adults aged 18 years or older
- Diagnosed with TBI (Concussion) or Healthy controls

What's involved:

- Tear collection
- Corneal imaging
- max 3 visits at UNSW Sydney

Duration:

Each visit takes approximately 45–60 minutes.

Why participate:

Help us develop a new, non-invasive diagnostic tool
for brain injury detection.
